Description

Our main purpose in developing this app is to convert every unorganized service that runs by students into an organized platform so their services can reach more other students/staff in UTP, and it will be easier to search. For example, many UTP students are doing grab services and just promoting it by Whatsapp text, but after a few days their customers couldn't find the text again, and it will take time to find it again. So, if we bring all the services provider into one app, the students/staff will find them more easily. Our first target is to convert this grab run by UTP students into an app, and later add more services that run UTP students such as clothing brands, food & more.
